

## Thinking About Development (Environment, Development and Public Policy: Cities and Development)

This book intends to be helpful to people-students and others who are beginning to think about how to change the world via that activity we call development planning. The issues of What is Progress? and How do we get it? are world-wide, although they appear in different form in societies like our own from the way they do in the Third World countries with their explicit development planning. These are two very big questions and have no easy or final answers. However, we can think about them in more rather than less effective ways. Thinking about them can be both a way of beginning to take action on issues of growth and change, and a way of understanding our own situation. vii viii

I PREFACE This book argues that thinking about development planning has gotten into trouble by dividing economy from society, and misconstruing moral-social-political issues as technical ones. Development planning has centered on economic planning, treating social issues as obstacles to growth, or as problems arising out of economic change. The book takes up a number of specific topics which enter into development planning-topics such as the organization of work, educational planning, family policy-to show how in reality the social and the economic, the moral and the technical, are one, and how thinking about policy in each area should therefore take an integrated perspective.
