

Reconstructing Late Pleistocene Human Behaviour in the Jordan Rift Valley (Bar International Series)

Ar Rasfa is a Middle Paleolithic open-air site located in the Rift Valley of Northwest Jordan excavated between 1997-1999. This book presents a detailed technological, typological, and palaeoanthropological analysis of the stone tool assemblage from Ar Rasfa. Artefacts reflecting the initial preparation and exploitation of local flint sources dominate the Ar Rasfa assemblage. Typologically, the assemblage is most similar to Levantine Mousterian assemblages such as those from Naame, Skhul and Qafzeh. Patterns of lithic variability and contextual evidence suggest Ar Rasfa was visited intermittently by human populations circulating between lake/river-edge resources in the Rift Valley bottom and woodland habitats along the ridge of the Transjordan Plateau.
