

The Building of a Wooden Ship

When the United States entered World War I the United States Shipping Board Emergency Fleet Corporation ramped up construction of cargo ships for the war effort. Even though steel was the modern material from which to construct ships, the EFC decided to use the many shipyards still building ships of wood to quickly meet the need for more ships. To train new employees in how to build wooden ships, naval architect Charles Davis wrote *The Building of a Wooden Ship*. Instead of the poor quality copies of this book available from most publishers, ours was carefully scanned from an original copy at a resolution intended for print reproduction. The fold-out plan pages (not present in other available reprints) have been moved to the back of the book and scanned as multiple separate single-sided pages so they can be removed and reassembled if the reader should so choose.
